

1. SMS control of the authorized and unauthorized callers
 - a) With the Arduino, create and manage list of unauthorized and authorized numbers
 - b) When an authorized number sends a command, send a list of previously unauthorized callers
 - c) With another command is sent from the authorized number, clear the list of unauthorized numbers
2. Advanced control of the application
 - a) Make it possible to add multiple authorized callers to the system
 - b) With SMS message, make it possible to add and remove authorized users to the system
 - c) Make it possible to ask for the authorized numbers list from the system. Make sure, that the system does not allow duplicate allowed numbers!

Make sure you show your results to the teacher!

If you get all these done and you still have time, ask the teacher for more things to do!
